## Sample Size & Assumptions

	009	Submission grade %	
1.	stu	ooll was done at a public University asking undergraduate students whether they are an in state student or out of state dent. A sample of 232 undergraduate students at the University were asked and it was revealed that 43% of students re from out of state. From the results, a 95% confidence interval was calculated to be (0.3663, 0.4937).	1/1 point
	Wh	nich of the following corresponds to the value of 43%? (Select all that apply)	
	<b>~</b>	Statistic	
		✓ correct Correct.	
		Parameter Sample proportion	
		✓ Correct Correct.	
		Population proportion	
	<b>~</b>	Estimate of the population proportion	
		✓ correct Correct.	
		Test statistic	
2.		order to make the above confidence interval researchers first had to check their assumptions. Select all the propriate assumptions that are needed to create a one population proportion confidence interval.	1 / 1 point
		The population proportion comes from data that is considered a simple random sample	
	<b>~</b>	The sample proportion comes from data that is considered a simple random sample	
		✓ correct Correct.	
	<b>~</b>	The number of respondents who replied "out of state" must be at least 10	
		✓ correct Correct.	
	<b>~</b>	The number of respondents who replied "in state" must be at least 10	
		✓ correct Correct.	
		The distribution of our population proportion must be normally distributed	
3.			1 / 1 point
	Wh	nat is the margin of error for the given 95% confidence interval above?	
	0	1.96	
	0	0.00106	
	0	0.0325

	0	0.1274	
		✓ Correct	

4.	A larger sample was taken and the same sample proportion was found. How would the width of the 9 confidence interval change from our initial interval?	5% 1/1 point
	○ Widen	
	<ul><li>Shorten</li></ul>	
	Stay the same	
	Unable to tell	
	✓ Correct	
	If the researcher would like to have their confidence interval be narrower, more precise, which of the would achieve this?	following 1/1 point
	Change the confidence level to 90%	
	Change the confidence level to 99%	
	Calculate a conservative 95% confidence interval	
	✓ Correct	
6.	What minimum sample size does the researcher need in order to create a 95% conservative confidence with a margin of error of no more than 4%?	ce interval 1/1 point
	O 24.5	
	O 25	
	O 600	
	O 600.25	
	⑥ 601	
	✓ Correct	
	<ul><li>○ 1067.11</li><li>○ 1068</li></ul>	
	O 1502.85	
	1503	
	✓ Correct	
8.	Which of the following would be considered an appropriate interpretation of the given 95% confidence	re interval? 1/1 point
	We estimate, with 95% confidence that the sample proportion of out of state undergraduate students at	this
	University is between (0.3663, 0.4937)  We are 95% confident that the population proportion of out of state undergraduate students at this Universe 36.63% and 49.37%	ersity is
	There is a 95% chance that the population proportion of out of state undergraduate students at this Unit between 36.63% and 49.37%	versity is
	Of the repeated this study many times we would expect to obtain the true population proportion of out of undergraduate students at this University 95% of the time in the resulting confidence interval of (0.3663,	
	✓ Correct	
).	Which of the following best describes the confidence level in the context of the problem?	1 / 1 point
	If we repeated this study many times, each time producing a new sample (of the same size) from which a confidence interval is computed, then we would expect the population proportion of out of state underg students at this University to be contained within the (0.3663, 0.4937) interval 95% of the time.	
	If we repeated a similar study many times, each time producing a new sample (of various sizes) from wh confidence interval is computed, then 95% of the resulting confidence intervals would be expected to co population proportion of out of state undergraduate students at this University.	
	If we repeated this study many times, each time producing a new sample (of the same size) from which a confidence interval is computed, then 95% of the resulting confidence intervals would be expected to co sample proportion of out of state undergraduate students at this University.	
	If we repeated this study many times, each time producing a new sample (of the same size) from which a	ı 95%

confidence interval is computed, then 95% of the resulting confidence intervals would be expected to contain the population proportion of out of state undergraduate students at this University.

✓ Correct
